DETAILED ACTION

Examiner's statement of reason of allowance

1. Claims 42-82 are allowed.
2. The following is an examiner's statement of reasons for allowance: the present invention relates to a data processing system, and in particular to a secret –key-controlled reversible circuit used for encrypting and decrypting data. Independent claims 42, 69 and 77, recites the uniquely distinct features of "a multiplexer circuit that receives a first portion of said input block of bits and a first set of key bits as inputs, the first portion of said input block of bits operable to select a second set of key bits out of the first set of key bits, wherein the selected second set of key bits are output by said multiplexer circuit, said first portion of bits are transferred intact without modification by an encryption operation to an output of said building block, and the number of bits in the second set of key bits is less than the number of bits in the first set of key bits; and a transformation circuit, for transforming a second portion of said input block of bits into transformed bits according to a reversible transformation chosen, by means of said selected second set of key bits, among a plurality of reversible transformations implemented in said transformation circuit, wherein said transformation circuit transforms said second portion of said input block of bits without receiving said first portion of said input block of bits as an input and said output block of bits comprises the transformed bits followed by said first portion of said input block of bits".

3. The closest prior art,

a) Lim et al (US 2002/0012430), discloses a pipelined encryption apparatus, the apparatus for encrypting 64-bit plain text blocks, comprising: input buffering unit for receiving a plain text block byte-by-byte and outputting a first and a second 32-bit plain text blocks in response to a first clock; encryption unit for performing time multiplexed encryption of the first and the second 32-bit plain text blocks in response to the first clock and a second clock, thereby generating a first and a second 32-bit cipher text blocks; and output buffering unit for receiving the first and the second 32-bit cipher text blocks in response to the second clock and outputting eight 8-bit cipher text blocks.

Those prior arts fail to anticipate or render the above underlined limitations obvious for claims 42, 69 and 77.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
